SUMMARY

Senior Full Stack Software Engineer with 10+ years of experience building consumer-scale products across frontend, backend, and platform systems. Shipped high-impact product and AI initiatives at Quizlet serving 60M+ monthly users, including RAG infrastructure, recommendation systems, subscriptions, and growth experiences.

EXPERIENCE

Quizlet | San Francisco, CA | **Senior Software Engineer** | *June 2025 – June 2026*

- **AI / RAG Infrastructure:** Designed and implemented Quizlet's RAG indexing pipeline using Vertex AI RAG Engine and Go microservices, building event-driven file ingestion, chunk retrieval APIs, and GCP infrastructure to power AI-generated content across the platform
- **Search Platform & Reliability:** Migrated Quizlet's core search logic from a PHP monolith into a dedicated Go microservice — including building Elasticsearch query classes to support search functionality during and after migration. Led performance triage and optimizations across team-owned search routes, reducing SLO breaches from 11 to 4, maintaining latency and availability targets across search endpoints.

Quizlet | San Francisco, CA | **Software Engineer** | *Nov 2021 – June 2025*

- **Folders & Subfolders:** Overhauled Quizlet's Folders feature into a full cross-material organizational system with tag-based hierarchy; authored the engineering plan, designed extensible DB schema, built monolith APIs and frontend, and shipped on time for Back to School.
- **Recommendation Pages:** Built backend and frontend foundation for Quizlet's ML-driven course and exam discovery surface — implemented monolith SDUI endpoints, Next.js routing, feature flags, and SEO-compliant structured metadata; launched on time as a primary organic and in-product entry point for students and teachers
- **Hack → PHP Migration:** Owned 10% of production traffic cutover in Quizlet's full monolithic Hack codebase to PHP migration: independently resolved complex technical blockers, enhanced internal diffing tooling to reduce team-wide validation friction, and migrated async batch jobs; contributions key in hitting the end-of-year deadline
- **Payments & Monetization:** Integrated Zuora-based subscription lifecycle workflows handling grace period expirations — implemented weekly payment retry logic over a 21-day window, triggering automated downgrade emails and account state changes on final failed attempt.
- **Apple Pay:** Led end-to-end design and implementation of Apple Pay on web and mWeb — expanding checkout payment options for Quizlet's subscriber base.

Infor Nexus | Oakland, CA | **Software Engineer** | *July 2016 – Nov 2021*

- **Supply Chain Platform:** Delivered full stack features across inventory visibility, shipment tracking, and real-time supply chain intelligence, including a global inventory dashboard aggregating inbound/outbound data across locations, DFS-based shipment date propagation to cascade delays through downstream legs, and a predictive supply chain visibility platform; owned quarterly production deployments from 2017 onward across release cycles.
- **Engineering Mentorship:** Recruited & mentored 8 junior engineers and interns through university channels, supporting team growth over a 5-year tenure.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Go, PHP, Java, SQL

Frontend: React, Next.js, HTML/CSS

Backend & Cloud: Go, REST APIs, Microservices, GCP, Event-Driven Architecture

Databases: MySQL, SQL Server

AI Tooling: Vertex AI RAG Engine, Claude Code, Cursor, MCPs, LLM Integration

EDUCATION

California Polytechnic State University, San Luis Obispo — Bachelor of Science, Software Engineering | June 2016
